BAI SECURITY

SECURITY AUDITING SERVICE

Social Engineering

Evaluation / Assessment

Social Engineering has long been one of the most common means for hackers to gain vital information about internal systems. Unfortunately, in many environments internal users will divulge sensitive information about systems and/or user-accounts to unauthorized individuals when approached with a cleverly crafted dialog by an outsider to the organization. With this in mind, it is extremely important to periodically evaluate your end-users compliance to security policies prohibiting such discussions without proper authorization or validation. BAI Security offers a non-threatening evaluation process which can be conducted remotely and/or on-site.

CORE AREAS OF THE BAI SECURITY AUDIT

Vulnerability Testing
Operating System Security Evaluation / Assessment
Social Engineering Evaluation / Assessment
